

Managing Spreadsheet Risk

Keeping you in control of your spreadsheets

Our risk management cycle

Spreadsheets offer a fast, flexible, intuitive and cost effective platform for rapidly analysing data and presenting information to support decision making. End user developed spreadsheets often fill the gap between the current business requirements and formally managed IT systems.

However, the very attributes that have made Excel Spreadsheets so popular lead to increased risks for the businesses that rely on them.

Clarity Consultancy Services can help you to manage these added risks.

We use the comprehensive spreadsheet auditing toolkit from Finsbury Solutions to **identify**, prioritise and **evaluate** your spreadsheets.

To help you to **resolve** any issues identified during the detailed evaluations we can:

- rebuild your spreadsheets to best practice standards;
- train your team through our bespoke Excel training courses including:
 - Excel modelling best practice
 - Spreadsheet risk management
- develop bespoke software to replace business critical spreadsheets; and
- document your business processes and spreadsheets (technical specification and user guide).

Spreadsheet risk management is an on-going process. To ensure that you can continue to manage your spreadsheet risk going forward, we can help you to establish an appropriate spreadsheet management **control** framework.
